

ToolBook® Translation System 10

The need to create content with international audiences in mind has never been more important. Left unchecked, the cost and time involved in producing information for a global audience can get out of hand.

ToolBook Translation System is a ToolBook localization solution that simplifies the translation of ToolBook content into foreign languages and reduces the cost, time, and complexity of developing international ToolBook content and applications. ToolBook Translation System empowers authors with a technology that assist the creating of content for a global audience.

PRODUCT HIGHLIGHTS:

- ToolBook Translation System's authoring component identifies translatable elements of your ToolBook course and extracts them – maintaining the integrity of all formatting, color information, hypertext information, and other data – into a database.
- Your Translators can focus on what they are best at producing the best content for your global audience. Translators don't need to know how to use ToolBook; instead, they use the included Translator application that is designed to make it easy for language experts to translate the ToolBook content to different languages. The translation is done outside of ToolBook and your Translators don't even need to have the ToolBook authoring system Installed. Workflow features enables the translation process to occur quickly and smoothly.

Different people can do these steps, for example, steps 1 can be done by a ToolBook developer, while a professional translator can do step 2. This allows you to have a ToolBook localization workflow that fits in with how you work. The ToolBook developer can have as much or as little involvement in the localization process as desired.
