

Online Content Review

Your learning management initiatives rely heavily on your ability to get meaningful content to users. That's why SumTotal offers an Online Content Review service. Our experts help you identify the most effective means of deploying your content online. Plus, we'll show you the best ways to integrate your online content into the SumTotal LMS—so you can achieve the learning results you expect.

Thorough content analysis opens door for best practice consultation

SumTotal consultants work directly with you to review your existing online content and applicable activity structures within TotalLMS™. Specifically, we look for ways to inject industry best practices, tackling problem areas such as online assessments, capturing scores, and third-party content integration. We also discuss how to set up and track SCORM- and AICC-compliant online courses.

Our goal is to help you configure your TotalLMS so that results are reported consistently and correctly to your user transcripts. As a result, you will be better equipped to maximize the value of your company's e-learning initiatives.

Expert recommendations drive further optimization of LMS

Following our review, SumTotal experts will provide you with a written summary of the tasks and changes we performed during our engagement. We'll also deliver a list of recommendations for next steps—including additional process changes, configuration settings or educational offerings that will help you realize the full potential of your LMS.
