

The SumTotal Talent Development Suite can seamlessly scale to deliver learning and performance functionality to thousands of concurrent users on databases containing hundreds of thousands of records. Application performance and scalability, however, often hinge on how you've configured your hardware, software, and network. Do you have the right CPU speed? What other applications are you running? Do you have appropriate memory and bandwidth available? How many users can you handle?

Is your infrastructure ready to reap maximum value?

With our Technical Review service, qualified SumTotal consultants help you optimize the health and stability of your underlying infrastructure. As a result, you'll be poised to achieve the greatest return on your learning and performance management investment.

Comprehensive system review optimizes infrastructure for stronger performance

During your review, we will walk you through the key variables that can affect the operation of your SumTotal Talent Development Suite. From resource constraints and devices such as load balancers or proxy servers, to variations in the amount and distribution of your data, to actual usage patterns, we'll help you ensure that your system configuration and infrastructure are capable of supporting your targeted user group.

Our review incorporates the following areas:

- Number of application servers needed to support your user population—including CPU, RAM, and hard drive space recommendations, based on active and concurrent usage
- OS-related settings on all Web servers
- IIS-related settings on all Web servers
- Database server properties and settings
- Database job scheduling
- Bandwidth planning

- Load balancer settings
- TotalIntegration™ review, including tool configurations and log file evaluations based on user and/or activity loads

In addition, we'll provide:

- Initial database storage recommendations, along with estimated growth recommendations
- Notification recommendations for TotalIntegration.

Review report provides definitive guidance for high-performance SumTotal deployment

Following your review, SumTotal consultants will document our findings and offer specific recommendations for configuring your infrastructure appropriately. We'll also identify detailed sizing parameters that give you a feel for the SumTotal "footprint," so you gain a clear picture of what the deployment would entail within your environment. Armed with these expert recommendations, you'll be able to make more informed decisions regarding your learning and performance management investments—and ready to gain optimal value from your SumTotal Talent Development Suite.
